Summary

Full Stack Developer with hands-on experience building scalable backend systems using Node.js, NestJS, and PostgreSQL. Skilled in designing RESTful APIs, optimizing database performance with TypeORM, and improving system reliability through Redis caching and RabbitMQ-based queue processing. Experienced in containerized deployments, CI/CD pipelines, and payment gateway integrations, with a strong focus on clean, maintainable, production-ready code.

Technical Skills

Languages: Java, JavaScript, TypeScript, SQL (PostgreSQL), MongoDB, HTML, CSS
Frameworks & Technologies: React.js, Next.js, Node.js, Koa, NestJS, Tailwind CSS, Ant Design
Databases & ORMs: PostgreSQL, MongoDB, TypeORM
Caching & Messaging: Redis (caching, pub/sub), RabbitMQ (queue-based processing)
Developer Tools: Git, GitLab, Docker, AWS, VS Code, Visual Studio, IntelliJ IDEA
Core Skills: REST API Development, Full-Stack Development, UI Component Design, Performance Optimization

Experience

Full Stack Developer Nov 2024 – Present
Creware Technologies *KA*

- Built and maintained full-stack web applications using React.js, NestJS, MongoDB, and PostgreSQL
- Built RESTful APIs with Koa and NestJS, optimizing backend logic to reduce unnecessary code and improve API response times
- Used TypeORM for schema design, entity relations, and database migrations across PostgreSQL-backed services
- Implemented Redis for caching frequently accessed data and session management, reducing database load and improving response times
- Integrated RabbitMQ for asynchronous, queue-based processing of background jobs, improving system reliability and throughput
- Integrated Razorpay payment gateway to enable secure, seamless transaction processing across applications
- Designed reusable UI components and structured frontend architecture for better scalability, maintainability, and user experience
- Refactored and streamlined CI/CD pipeline configuration, reducing build time and improving deployment efficiency
- Containerized applications using Docker to ensure consistent environments across development, testing, and production
- Collaborated with cross-functional teams using GitLab for version control, code reviews, and agile sprint planning
- Implemented authentication and role-based access control to secure application endpoints and user data
- Improved code reliability and reduced production bugs

Jr Software Developer Intern Mar 2023 – Oct 2023
Bytestrone *KL*

- Developed full-stack applications using Java, React.js, and PostgreSQL to support business and operational requirements
- Built and maintained backend services, database integrations, and responsive frontend interfaces for efficient system performance
- Collaborated on application development, troubleshooting, and feature enhancements while managing code through structured development workflows

Personal Projects

Video Processing Platform | *Node.js, FFmpeg, RabbitMQ, Redis*

- Developed a scalable backend video processing platform using Node.js to automate media editing workflows
- Integrated FFmpeg pipelines for video resizing, compression, trimming, format conversion, and resolution adjustments
- Implemented asynchronous, RabbitMQ-based queue processing for efficient handling of large video files and background job orchestration
- Used Redis to cache job status and metadata, reducing repeated database reads during processing

- Built REST APIs for video upload, processing, and task management with optimized background execution
- Orchestrated prebuilt FFmpeg C/C++ binaries through Node.js services for high-performance media processing

Real-Time Chat Application | *Node.js, Socket.IO, React, MongoDB, Express.js*

- Developed a real-time chat application enabling instant messaging between users using Socket.IO
- Built secure backend APIs with Node.js and Express.js for user authentication and chat management
- Implemented real-time communication features including online status and message delivery updates
- Integrated MongoDB for storing user profiles, chat history, and conversation data
- Designed responsive frontend interfaces using React for seamless cross-device user experience

Education

Saintgits College of Engineering Kottayam, Kerala

B.Tech in Electronics and Communication Engineering *Aug 2018 – May 2022*
